(54) Title: TRICK MODE OPERATION FOR SUBCHANNELS

(57) Abstract: In a receiver coupled to a recording device that includes a digital storage medium, there is provided a method for providing trick mode operations for sub-channels of multiplexed streams stored on the digital storage medium. A trick mode command specifically directed to a particular sub-channel of a multiplexed stream is sent to the recording device. Frame data corresponding to the particular sub-channel is received from the recording device. Trick mode data for the particular sub-channel is extracted from the frame data.
